# FAQs

---

**Q: Can bulbs be used in sockets with wall dimmers?**

A: No, bulbs are designed to be used in on/off sockets only. To dim the bulb, please use the app or voice assistants for control.

**Q: Can I connect my bulbs directly to Amazon/Google without the Tuya Smart App?**

A: Unfortunately no, the Tuya app is required to setup the LED light bulb.

**Q: Does the bulb remember settings after it's powered off, like a power outage?**

A: Yes. The bulb will remember all settings until it is reset into pairing mode (by turning it on and off 3 consecutive times).

**Q: How come some of the apps I downloaded appears different from the ones from this manual?**

A: We do not have control over how Amazon and Google design their apps, so things may look slightly different upon their app updates (such as having the icons located at different place). However the main idea to connecting the bulb to the apps should be the same, if you are not sure on how to make things work, please contact our customer service team.

**Q: Is there a max number of bulbs I can run at the same time?**

A: There is no limit to the max number you can install.
